EXPERIENCE

Software Engineer 2 **New Relic - Security RX** **Jan 2026 – Present**

- Engineered Java/Kotlin microservices across APM, cloud, and infrastructure, delivering secure user access APIs.
- Architected an automated GitHub PR-remediation engine to autonomously patch security vulnerabilities across customer entities.
- Resolved consumer lag in high-volume Kafka pipelines through parallel network calls and batched database operations.
- Hardened services by resolving autoscaling and resource right-sizing, deployed alerts to accelerate incident triage.
- Resolved CVE data discrepancies with external vendors and normalized misconfiguration findings from AWS Security Hub.
- Executed complex MySQL schema migrations and optimized query performance by 4x using indexing and smart filtering.
- Led GenAI adoption by authoring Claude Code skills/plugins, and architecting lightweight pre-processors to cut token costs by 50%.
- *Tech Stack: Java, Kotlin, Spring Boot, Kafka, MySQL, ClickHouse, AWS, Kubernetes, Microservices, Cell Architecture, GenAI*

Software Engineer (Grades 6 & 8) **Cisco - Smart Licensing** **Aug 2021 – Jan 2026**

- Built high-performance components for core router systems and reduced CPU and memory usage in critical execution paths.
- Optimized telemetry pipelines for multi-MB datasets, lowering router load by 5× and improving end-to-end latency.
- Automated RADIUS setup and router configuration to make authentication and authorization behavior consistent across deployments.
- Built Python bindings for low-level C libraries so backend services could use networking features with less effort.
- Resolved concurrency and performance issues in production systems, and built parallel CI tests to cut validation time.
- *Tech Stack: Python, C, Netconf, JSON, Protobuf, Linux, GDB, Valgrind, Shell scripting*

Research Intern **Adobe** **Apr 2020 – Jul 2020**

- **US Patent: US12014217B2**
- Built a resource-control system to schedule executable jobs on cloud compute instances.
- Used job logs to estimate utility/time and generate control actions with an RL-based model.
- *Tech Stack: Python, PyTorch, TensorFlow, AWS EC2, Docker, Flask, MongoDB, React*

EDUCATION

Varanasi, India **Indian Institute of Technology (IIT) BHU** **Aug 2017 – May 2021**

- Bachelor of Technology, Computer Science, CPI: 9.26/10.0

PROJECTS

Test Builder and Examination Application

- Built a web app to create, tag, and auto-generate tests with result and rank calculation.
- Developed APIs in Django REST Framework and frontend in Vue.js.
- Dockerized and deployed via Helm on GKE with ArgoCD; added CI/CD and monitoring.
- *Tech Stack: Python, JavaScript, Django, Vue.js, PostgreSQL, Docker, Kubernetes, GKE, ArgoCD, Prometheus*

SevaConnect NGO CRM

- Architected a multi-tenant CRM with organization-scoped Role-Based Access Control (RBAC).
- An NGO automation to coordinate volunteers, donors, and staff with activity logging, communication and performance overview.
- Integrated an interactive communication engine for automated support and notification workflows.
- *Tech Stack: Django, Next.js, PostgreSQL, AWS, WhatsApp API*

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C/C++, Kotlin, Shell
Backend & Data: REST APIs, Microservices, Kafka, SQL, MySQL, PostgreSQL, Redis, Concurrency, Caching
Systems/Networking: Linux, Netconf, Protobuf, Performance Profiling, Debugging
Cloud/DevOps: Docker, Kubernetes, AWS, GCP (familiar), CI/CD, Git
